An interoperable care management ecosystem for remote chronic patient monitoring through data aggregation.
Patients losing time communing and waiting in the doctor's office

Even patients with disabilities, physically impaired or living in remote and rural areas.

Doctors waste their time for routine visits

That can be totally avoided.

Healthcare Systems and Professionals lose money every day

• For unpaid remote services that they already offer.
• Missed appointments lead to bad health outcomes and increased medical costs.
Mobile & Web Applications

for Patients

for Doctors
DATA AGGREGATION

From wearables, smart home and wireless medical devices

GAMIFIED ENVIRONMENT

To engage and enable patients self manage their health with clear and measured goals.
REMOTE MANAGEMENT

In real-time and with medical alerts for patients that are high risk. Using the same patient-generated data.

VIRTUAL CARE

An end-to-end solution with an appointment, video call, messaging and, most importantly, a payment system.

Healthcare professionals work on the patient using the same patient-generated data. Patients are the owners of their health data and they are empowered to self-care.

Access to care for disabled, physically impaired and chronic patients in rural areas. Patients are free to choose their treating physicians, health and fitness devices.

Connected health based on interoperability and health informatics standards.
